

Cleaning the Hydraulic Suction Screen

Remove 8mm hex plug and drain Hydraulic Oil into a container

Remove hydraulic hose from 50mm suction fitting on engine side of processor

RR2500 / RR20T

Remove 50mm fitting from tank

Clean out any dirt or debris in bottom of tank, if possible flush tank with 2-3 litres of clean Hyd. Oil

RR2500 / RR20T

Clean filter with solvent, do not puncture screen, put new thread tape on fitting and reverse steps to re-install

If processor does not have a magnet on the drain plug it is advisable to install one either in the tank or on the drain plug as pictured, put new thread tape on drain plug and re-install until tight

RR2500 / RR20T
